

AMENDMENTS TO THE DISCLOSURE

Please add after page 34:

ABSTRACT OF THE DISCLOSURE**A DEVICE FOR SINGLE-UNIT DISPENSING OF SHAPED OBJECTS SUCH AS
PHARMACEUTICAL TABLETS**

One end of the device is connected to a container in which the loose objects are stored, and optionally the other end connected to a cap for receiving the dispensed objects. The inventive device comprises a female and a male parts arranged coaxially. The female part is fixed and is used to collect, organize, and move the objects, and to store the same in a waiting line in one or more chute, while the male part is rotatable and is used to effect a single-unit removal of the objects to be dispensed by means of rotation in one direction of the other.
